

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Metrology in electromobility [S1Elmob1>MwE2]

Course

Field of study

Electromobility

Year/Semester

2/3

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

Polish

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

0

Laboratory classes

30

Other

0

Tutorials

0

Projects/seminars

0

Number of credit points

3,00

Coordinators

dr inż. Arkadiusz Hulewicz

arkadiusz.hulewicz@put.poznan.pl

dr inż. Zbigniew Krawiecki

zbigniew.krawiecki@put.poznan.pl

Lecturers

Prerequisites

The student starting this course should have basic knowledge of mathematics, physics and the basics of electrical engineering and the ability to work in a laboratory group.

Course objective

Learning about various measurement methods, the properties of modern measuring instruments, the principles of using analog and digital instruments and the principles of elaborating measurement results.

Course-related learning outcomes

Knowledge:

1. Has knowledge of basic measurements of electrical quantities using analog and digital instruments.
2. Has knowledge of technical and functional properties of measuring devices.
3. Has knowledge of working out the results of the experiment.

Skills:

1. Knows how to use appropriate methods to measure selected electrical quantities.
2. Knows how to use measuring instruments in accordance with the user's manual.
3. Can perform an engineering task and assess the accuracy of the results.

Social competences:

1. Understands that knowledge of the operation of electrical circuits is important in the work of an engineer.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

The skills acquired during laboratory exercises are verified on the basis of reports prepared by students. Continuous assessment, in every class. Assessment of knowledge and skills related to the implementation of the measurement task. Rewarding the use of learned principles and methods.

Programme content

The issues covered are related to basic issues related to planning and implementing measurement tasks related to electrical quantities. Issues related to the calculation of errors and uncertainty of measurement results and the measurement of electrical signals using an oscilloscope and other measurement methods will be presented.

Course topics

The issues covered are related to:

- planning and implementation of the measurement task
- measurement of basic electrical quantities
- calculation of errors and uncertainty of measurement results
- preparation of documentation from measurements
- measurement of electrical signals using an oscilloscope
- analog and digital measurement of electrical quantities
- using measuring bridges
- using simple measurement systems
- getting to know the safety rules at the measuring station.

Teaching methods

Performing laboratory exercises in teams (preparation of the station, building measuring systems, performing experiments) with the help and supervision of the teacher.

Breakdown of average student's workload

	Hours	ECTS
Total workload	80	3,00
Classes requiring direct contact with the teacher	30	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	50	2,00
