

### POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

## **COURSE DESCRIPTION CARD - SYLLABUS**

Course name

Cellular network design [S2EiT1-SSiU>PSK]

Course

Field of study Year/Semester

**Electronics and Telecommunications** 1/2

Area of study (specialization) Profile of study

Networks, Systems and Services general academic

Course offered in Level of study

second-cycle Polish

Form of study Requirements

full-time elective

**Number of hours** 

Lecture Laboratory classes Other 0

30

**Tutorials** Projects/seminars

15 0

Number of credit points

4,00

Coordinators Lecturers

dr hab. inż. Rafał Krenz rafal.krenz@put.poznan.pl

## **Prerequisites**

Knowledge of cellular systems technology, with emphasis on radio access network. Knowledge of EM wave propagation and antenna systems. Understanding computer simulation of communication systems.

## Course objective

The course aims at providing informations related to the desing and optimisation process of radio access networks for 2G/3G/4G cellular systems. The practical skills, e.g. the application of professional planning software tools and using radiocommunication measurement equipment (spectrum analysers, RF signal generators) are also introduced.

### Course-related learning outcomes

## Knowledge:

Knows and understands the desing and optimisation process of radio access networks for 2G/3G/4G cellular systems, with emphasis on coverage and capacity planning and the relation between them. Understands the inter-system and intra-system EM compatibility issues related to the radio access network planning and optimization.

#### Skills:

Is able to analyze the requirements and to accomplish the radio access network planning process for 2G/3G/4G cellular systems.

Can use professional planning software tools and advanced radiocommunication measurement equipment.

## Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Lecture: oral exam consisting of 5-6 questions, based on the list of 25 topics shared during the course duration. Final grade calculated as an average of all partial grades in the range 2-5.

Tutorials/laboratory classes: continuous evaluation of tasks assigned by the teacher, evaluation of final project; final grade calculated as an average of all partial grades in the range 2-5 (D-A)

## Programme content

#### Lectures:

- 1. UMTS/LTE cellular systems an overview of Radio Access Networks.
- 2. Propagation phenomena and radio channel modelling.
- 3. Theoretical models of radio networks link-level modeling.
- 4. Theoretical models of radio networks system-level modeling.
- 5. Radio network planning network dimensioning.
- 6. Radio network planning detailed planning od system parameters.
- 7. Electromagnetic compatibility in cellular systems.
- 8. Radio network optimisation.
- 9. Specific issues of LTE radio network planning.
- 10. Specific issues of GSM radio network planning.
- 11. Indoor radio network planning.

### Laboratory classes:

- 1. Radio link budget analysis.
- 2. Coverage planning for macro-cell based radio access networks.
- 3. Capacity planning for micro/pico-cell based radio access networks.
- 4. Indoor radio channel models.
- 5. Measuring radio signals and devices.

### **Course topics**

none

# **Teaching methods**

Lecture: multimedia presentation

Tutorials/laboratory classes: practical exercises using professional software planning tools and measurement devices, student projects assigned by the teacher,

### Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,00
Classes requiring direct contact with the teacher	70	3,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	30	1,00
