

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Optical fibers communication systems [S2EiT1E-TIT>ZSŚ]

Course

Field of study

Electronics and Telecommunications

Year/Semester

1/1

Area of study (specialization)

Information and Communication Technologies

Profile of study

general academic

Level of study

second-cycle

Course offered in

English

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

30

Laboratory classes

15

Other

0

Tutorials

0

Projects/seminars

0

Number of credit points

3,00

Coordinators

dr inż. Jan Lamperski

jan.lamperski@put.poznan.pl

Lecturers

Prerequisites

Basic knowledge of optics and photonics Ability to specify the basic components required for the construction of optical links Ability to arrange for and carry out measurements of electrical signals and electronic components Ability to work in a group Understanding the importance of photonics in the development of telecommunications systems

Course objective

To provide students with theoretical and practical knowledge and understanding of optical communication systems. To prepare students to design, operate and maintain optical fiber systems.

Course-related learning outcomes

none

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Assesment method: written or/and oral exam. Written exam in test form consisting of approximately 10-

18 questions, equally graded, customised for individual students. Passed with at least 50%.
The laboratory projects graded according to students' reports.

Programme content

Proposed lecture material, some modifications are possible at student's request:

Optical propagation, acceptance angle, numerical aperture, optical modes, step index and graded index fibers, cut-off wavelength, single mode fibers.

Transmission characteristics of optical fibers: attenuation, modal, chromatic and polarisation dispersion.

DWDM fibers. Linear and nonlinear propagation effects.

Passive network components. Integrated optics. Optical switching: technology and characteristics.

Optical sources and detectors.

Principles of optical amplifiers and classification. Gain and noise characteristics.

Application of OA to subscriber loops, trunk and undersea transmission systems.

Multiplexing methods: WDM, TCM, SCM and OTDM.

Optical multiplexing and amplification as method of upgrading fiber optic transmission systems.

Coherent optical fiber systems. Principles of coherent detection. Modulation formats. Demodulation schemes. Noise in coherent optical systems.

Advanced modulation formats.

Soliton transmission systems. Nonlinear wave motion in optical fibers. Soliton theory.

List of proposed lab projects:

- Optical spectrum analyser.
- Semiconductor light sources, laser controllers.
- Investigation of passive optical components.
- A/O Bragg cell - multiwavelength generation
- Mach-Zehnder fiber modulator.
- EDFA part I.
- EDFA part II.
- Tunable fiber ring EDFA laser.
- EDFA DWDM configuration.
- State of polarization measurement.
- PDL measurements.
- PMD / CD measurements.
- EDFA mode-locked pulse laser
- Coherent measurement of spectral linewidth
- E/O switch

Course topics

Lectures

Introduction

Modern Fibers - Optical Channel Effects

Modern Fibers - Nonlinear Effects

Optical Amplifiers

EDFA,

Numerical Simulation of EDFA

All Optical Signal Processing

WDM Multiplexing

Coherent Detection

Coherent Systems

Advanced Modulation Formats

100G/400G Systems / DWDM Systems

Soliton Transmission

Raman Amplifiers

System Design Methodology

List of proposed lab projects:

- Optical spectrum analyser.
- Semiconductor light sources, laser controllers.

- Investigation of passive optical components.
- A/O Bragg cell - multiwavelength generation
- Mach-Zehnder fiber modulator.
- EDFA part I.
- EDFA part II.
- Tunable fiber ring EDFA laser.
- EDFA DWDM configuration.
- State of polarization measurement.
- PDL measurements.
- PMD / CD measurements.
- EDFA mode-locked pulse laser
- Coherent measurement of spectral linewidth
- E/O switch

Teaching methods

Multimedia, problem oriented presentation.

Laboratory are carried out in teams. A leader is selected for each project. The leader is responsible for writing a report. The first tasks are selected by a lecturer and the remaining ones are chosen by students.

Breakdown of average student's workload

	Hours	ECTS
Total workload	0	0,00
Classes requiring direct contact with the teacher	0	0,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	0	0,00
