

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Materials Engineering [N1Eltech1>IM]

Course

Field of study

Electrical Engineering

Year/Semester

2/4

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

Polish

Form of study

part-time

Requirements

compulsory

Number of hours

Lecture

10

Laboratory classes

10

Other

0

Tutorials

0

Projects/seminars

0

Number of credit points

2,00

Coordinators

dr hab. inż. Jarosław Gielniak prof. PP
jaroslaw.gielniak@put.poznan.pl

Lecturers

Prerequisites

Mathematics, chemistry and physics fundamentals. Students can assemble the measurement system, can perform measurements of basic physical quantities. Is able to develop test results and work in a group. Understands the importance of teamwork

Course objective

Knowledge of basic materials used in electrical engineering, phenomena occurring in them and characterized them properties. Learning new techniques and research methods.

Course-related learning outcomes

Knowledge:

1. The student has structured and theoretically founded knowledge of the structure and operation of electrical equipment, is knowledgeable about the exploitation of technical systems
2. The student has a basic knowledge of the properties and applications of materials used in electrical engineering
3. The student has knowledge of the physical phenomena occurring in insulating, conductive, semi-conductive and magnetic materials

Skills:

1. Students can compile the research documentation and discuss obtained research results
2. The student can choose the right method and use the measuring equipment to determine the basic characteristics specific to tested materials

Social competences:

1. The student understands the aspects and consequences of the use of materials, including the impact on the environment, and the related responsibility for decisions
2. The student is aware of their own responsibility for their work and a willingness to comply with the principles of teamwork and shared responsibility for the implementation of tasks

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Lecture:

Assessment of knowledge and skills on the final test (multiple choice test consisting of 15 tasks, 15 points can be obtained - passing the exam from 7.5 points)

Laboratory classes:

- continuous assessment, during each class - rewarding the increase in the ability to use known principles and methods,
- assessment of knowledge and skills related to the implementation of the exercise task, evaluation of the report of the exercise.

Programme content

588 / 5 000

Micro and macroscopic structure of insulating, semi-conducting, conducting, magnetic and superconducting materials used in the power industry. Properties and applications of the discussed materials. Theories of conduction (electron gas and band theory), magnetism and accompanying phenomena, theory of superconductivity. Basic quantities describing the properties of materials (volume resistivity, surface resistivity, complex permittivity, permeability, magnetic loss, dielectric loss coefficient, electrical strength, hardness, impact strength).

Course topics

Lectures:

Insulating materials - gases (air, nitrogen, SF₆, hydrogen, freon, mixtures), liquids (vegetable, mineral and synthetic oils), new electro-insulating liquids, in particular biodegradable synthetic and natural liquids, their mixtures and nanofluids based on these liquids fibrous materials (cellulose, glass, carbon and fibres), elastomers (natural and synthetic rubbers), thermoplastics, hardening plastics, inorganic dielectric (mica, glass, ceramics) - conductivity in dielectrics. Magnetic materials - theory of magnetism, ferromagnetic, paramagnetic, ferri- and antiferromagnetic materials, materials magnetically soft and hard. Conductive materials - theory of conduction, scattering centres, conductive and resistive materials. Superconductors - the theory of superconductivity, classic, mixed and high temperature superconductors, cryogenics. Semiconductors - types, applications. Methods for testing the mechanical, electrical and chemical properties of materials - hardness test, impact resistance, tensile strength, electric polarization, volume and surface resistivity, complex permittivity, humidity, acidity, polymerisation degree.

Laboratory classes:

experimental tests of quantities describing the characteristics of materials (testing of hardness, impact strength, permittivity, permeability, resistivity, hydrophobicity, electrical strength), testing of current-voltage characteristics of semi-conductive materials.

Teaching methods

lectures - lecture with multimedia presentation (including: drawings, pictures) supplemented with examples given on the board and presentation of samples of discussed materials. Theory presented in close connection with practice

Laboratory classes:

laboratory exercises carried out in teams of several, assembling of measuring systems in practice, measurements and analysis of the results obtained carried out with the teacher

Breakdown of average student's workload

	Hours	ECTS
Total workload	55	2,00
Classes requiring direct contact with the teacher	30	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	25	1,00
