

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Generation and transfer of electric energy [N1Eltech1>A-WiPEE]

Course

Field of study

Electrical Engineering

Year/Semester

4/8

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

Polish

Form of study

part-time

Requirements

elective

Number of hours

Lecture

20

Laboratory classes

20

Other

0

Tutorials

0

Projects/seminars

0

Number of credit points

4,00

Coordinators

dr hab. inż. Bartosz Ceran prof. PP

Lecturers

Prerequisites

Basic knowledge in the field of technical thermodynamics, the theory of electrical circuits, electrical machines and power engineering. The ability to effectively self-study in a field related to the chosen field of study. Awareness of the need to expand their competences, readiness to cooperate within a team.

Course objective

Understanding the technology of generating electricity in various types of power plants as well as the construction and operation principles of basic energy devices. Acquainting with the parameters and tasks of modern power systems, electricity transmission and distribution subsystems. Construction of AC transmission systems. Getting to know the issues of transmission of electricity over short and long distances. Control of power transmission in AC transmission systems. Application of direct current transmission systems.

Course-related learning outcomes

Knowledge:

1. Student has ordered and theoretically founded knowledge of the theory of electrical circuits, knows the basic laws of electrical engineering and thermodynamics.
2. Student has structured knowledge in the field of electricity generation technology. He knows the structure of the manufacturing sector of the National Power System.

Skills:

1. Student can make calculations of the energy balance of the power plant's steam cycle and carry out design calculations of the basic devices included in the power plant's technological system.
2. Student is able to use known methods and mathematical models to analyze the transmission line.

Social competences:

1. Is aware of the impact of electricity generation technology on the environment.
2. Understands the need to improve their professional, personal and social competences.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Lecture

- checking knowledge in the form of passing a written exam.

Programme content

National power system. Power plants and high voltage transmission lines.

Course topics

Hierarchical structure of the power network Construction of HV and LV AC transmission systems, contemporary development trends

Static, dynamic and voltage stability, self-regulating properties of the system.

Long lines (wave phenomena, natural power, line tuning), direct current transmission. Properties of selected FACTS controllers.

Laboratory classes

Testing of the steam power plant's own energy equipment

Measurements of thermodynamic factor parameters

Testing of different types of fuels.

Practical operation of simulation software for the analysis of steady-state and transient states in the power system at the high and highest voltage levels (e.g. power dissipation, emergency states, operational problems).

Research on physical models of network phenomena (the impact of compensation in the HV line on energy transmission). Using thermal imaging to examine equipment.

Teaching methods

Lecture

Lecture with multimedia presentation supplemented with examples given on the board.

Laboratory classes

Laboratory exercises performed with the help of engineering programs.

Measurements of electrical parameters in didactic stands.

Bibliography

Basic

1. Elektrownie, D. Laudyn, M. Pawlik, F. Strzelczyk, WNT W-wa 2000
2. Maszyny i urządzenia energetyczne, W. Szuman, WSiP W-wa 1985
3. Kotły parowe. Konstrukcja i obliczenia, P. Orłowski, W. Dobrzański, E. Szwarc, WNT W-wa 1979
4. Turbiny ciepłne. Zagadnienia termodynamiczne i przepływowe, E. Tuliszką WNT W-wa 1973

5. Wytwarzanie rozproszone energii elektrycznej i ciepła, J. Paska, Oficyna Wydawnicza Politechniki Warszawskiej. 2010
 6. Sz. Kujszczyk (pod red.): Elektroenergetyczne układy przesyłowe, WNT, Warszawa 1997.
 7. Sz. Kujszczyk (pod red.): Elektroenergetyczne sieci rozdzielcze, tom 1 i 2, Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 2004 r.
 9. P. Kacejko, J. Machowski: Zwarcia w systemach elektroenergetycznych, WN-T, Warszawa 2013
 10. Poradnik Inżyniera Elektryka . t.3. WN-T, Warszawa 2011
 11. Z. Kremens, M. Sobierajski: Analiza systemów elektroenergetycznych. WNT, Warszawa, 1996.
 12. P. Kacejko, J. Machowski: Zwarcia w systemach elektroenergetycznych. WNT, Warszawa, 2002
- Additional
1. Układy i urządzenia potrzeb własnych, M. Pawlik, J. Skierski, WNT W-wa 1986
 2. Gazowe układy kogeneracyjne, J. Skorek, J. Kalina, WNT, 2005
 3. Technologie energetyczne, T. J.Chmielniak, Wydawnictwo Politechniki Śląskiej, 2004
 4. Wytwarzanie i użytkowanie energii w przemyśle, J. Górzyński, K. Urbaniec, Oficyna Wydawnicza Politechniki Warszawskiej, 2000
 5. T. Kahl: Sieci elektroenergetyczne. WNT, Warszawa 1984
 6. J. Popczyk: Elektroenergetyczne układy przesyłowe, WPŚ, Gliwice 1984
 7. M. Cegielski: Sieci i systemy elektroenergetyczne. PWN, Warszawa, 1979.

Breakdown of average student's workload

	Hours	ECTS
Total workload	105	4,00
Classes requiring direct contact with the teacher	60	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	45	2,00
