

### POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

### **COURSE DESCRIPTION CARD - SYLLABUS**

Course name

Object oriented programming [S2Eltech2>PO1]

Course

Field of study Year/Semester

**Electrical Engineering** 1/1

Area of study (specialization) Profile of study

Lighting Engineering general academic

Level of study Course offered in

second-cycle Polish

Form of study Requirements full-time compulsory

Number of hours

Lecture Laboratory classes Other 0

15

**Tutorials** Projects/seminars

0 0

Number of credit points

1.00

Coordinators Lecturers

dr hab. inż. Leszek Kasprzyk prof. PP leszek.kasprzyk@put.poznan.pl

# **Prerequisites**

A student beginning this course should have basic knowledge of computer science and programming. Additionally, he or she should have abstract thinking skills, be able to acquire information from indicated sources and show readiness to cooperate in a team.

## Course objective

To teach students theoretical and practical issues of high-level programming with elements of objectoriented programming, to acquire skills to create applications in Microsoft Visual Studio environment (in C# language). Developing students' skills of solving problems that occur during design and implementation of technical applications.

# Course-related learning outcomes

### Knowledge:

The student knows the principles of high-level programming. The student has knowledge of objectoriented programming, which is useful in creating technical applications.

Skills:

The student is able to use tools for programming with the use of object-oriented programming elements. The student is able to program in the C# language.

#### Social competences:

Awareness of the speed of development of information technology and the related need to update knowledge. Is able to independently search for information in literature and Internet, also in foreign languages.

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Knowledge acquired during the lecture is verified during a final colloquium consisting of several dozen questions (closed) in the eKursy system, scored depending on their level of difficulty. Passing threshold: 50% of points.

Students can also earn additional points for activity during classes.

The final topics on which the questions are based will be given during the lecture or made available to students in the "eKursy" system.

The retake will be held in oral mode.

### Programme content

Presentation of basic issues related to object-oriented programming in the Visual Studio C# environment. Issues of representing physical reality in data structures.

# **Course topics**

- 1. Overview of the MS Visual Studio environment
- 2. Enumeration type, explicit and implicit conversion
- 3. Creating a class and an object
- 4. Fields, methods, encapsulation
- 5. Constructors, destructor, operator, static elements
- 6. Readonly fields
- 7. Properties
- 8. Static elements of classes
- 9. Operator overloading
- 10. Inheritance
- 11. Encapsulation in inherited classes (protected)
- 12. Polymorphism
- 13. Abstract classes and methods
- 14. Interfaces, extensions

#### **Teaching methods**

Multimedia presentation, illustrated with examples given on the board and computer animations, initiating discussions during the lecture.

Additional materials are placed in the "eKursy" system.

Lectures are enriched with instructional films.

# **Bibliography**

#### Basic:

# Breakdown of average student's workload

	Hours	ECTS
Total workload	25	1,00
Classes requiring direct contact with the teacher	15	0,50
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation)	10	0,50
