

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Gas networks [N2EPiO1-TGiEO>SG]

Course

Field of study

Industrial and Renewable Energy Systems

Year/Semester

1/1

Area of study (specialization)

Gas Technology and Renewable Energy

Profile of study

general academic

Level of study

second-cycle

Course offered in

Polish

Form of study

part-time

Requirements

compulsory

Number of hours

Lecture

18

Laboratory classes

0

Other

0

Tutorials

9

Projects/seminars

0

Number of credit points

3,00

Coordinators

dr inż. Michał Gołębiewski

michal.golebiewski@put.poznan.pl

Lecturers

Prerequisites

Basic information on thermodynamics, heat transfer and fluid mechanics including the calculation of flow parameters in pipelines. Performing thermodynamic and flow calculations for selected fluid flow issues. The student is able to cooperate in a group, taking on different roles in it to solve the tasks set before him.

Course objective

Understanding the basic elements of gas network construction and methods of their design

Course-related learning outcomes

Knowledge:

- 1.knows the basic processes occurring in the life cycle of devices, facilities and technical systems used gas networks
- 2.student has deep knowledge of operational parameters impact on the efficiency of energy machines works in gas networks and their functioning of energy systems
- 3.student has knowledge of the negative impact of gas networks on the natural environment

Skills:

1. student is able to use analytical, simulation and experimental methods to formulate and solve engineering tasks in the field of gas networks
2. student is able to solve research and engineering tasks requiring the use of engineering standards and norms as well as the use of technologies appropriate for gas networks, using experience gained in a professional environment engaged in engineering activities
3. student is able to manage the work of the team in area of gas networks

Social competences:

1. student is ready to critically assess knowledge and received information in the field of gas networks
2. student is ready to think and act in an entrepreneurial way in the field of gas networks
3. student is ready to perform responsible professional roles, taking into account changing social needs, including:
 - development of the profession's achievements,
 - maintenance of the profession ethos,
 - compliance of professional development with ethics principles and introduce actions to comply with these principles

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Lecture - the written examination The evaluation of student knowledge will be held based on answers on 5 questions from the material presented during the lectures.

Classes - final test and rewarding knowledge necessary for the accomplishment of the problems in the area of the subject

Programme content

Construction of low and high pressure gas transport systems, calculations of basic elements of gas station construction, gas stations, control systems, pipeline corrosion protection, explosion hazard zones, pipeline construction materials.

Course topics

Lecture:

1. Classification of gas networks
2. Materials used in the production of gas pipelines
3. Gas pipeline construction methods
4. Inspection and testing methods of gas pipelines
5. Rehabilitation of gas pipelines
6. Gas stations - introduction
7. Basic elements of gas stations
8. Methods of regulating gas stations

Exercises:

1. Hydraulic calculations of gas networks I
2. Hydraulic calculations of gas networks II
3. Strength calculations of gas pipelines
4. Calculations of gas station elements

Teaching methods

Lecture: multimedia presentation, illustrated with examples on the board.

Exercises: performing theoretical calculations on the board.

Bibliography

Basic

1. Tuliszką E.: Mechanika Płynów
2. Bąkowski K.: Sieci i instalacje gazowe
3. Andrzej Osiadacz: Stacje gazowe. Teoria, projektowanie, eksploatacja
4. Witalis Ratasiewicz: Stacje gazowe w systemach dostawy gazu, Poradnik; Polskie Zrzeszenie

Inżynierów i Techników Sanitarnych

5. Grabowski H.: Poradnik techniczno-budowlany dla użytkowników sieci gazowej w systemie dystrybucyjnym. SITP NiG Ośrodek Szkolenia i Rzeczoznawstwa, Grupa Terenowa Rzeczoznawców w Poznaniu, 2011

Additional

1. Rybicki Cz., Łuczyński S.: Pomiary natężenia przepływu. Wiertnictwo Nafta Gaz, t. 24 z.2, 2007.

Breakdown of average student's workload

	Hours	ECTS
Total workload	90	3,00
Classes requiring direct contact with the teacher	30	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	60	2,00
