

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Master's Degree Diploma Seminar [S2FT2>SDM]

Course

Field of study

Technical Physics

Year/Semester

2/3

Area of study (specialization)

–

Profile of study

general academic

Level of study

second-cycle

Course offered in

Polish

Form of study

full-time

Requirements

elective

Number of hours

Lecture

0

Laboratory classes

0

Other

0

Tutorials

0

Projects/seminars

15

Number of credit points

4,00

Coordinators

dr hab. Mirosław Szybowicz prof. PP
miroslaw.szybowicz@put.poznan.pl

dr hab. inż. Wojciech Koczorowski prof. PP
wojciech.koczorowski@put.poznan.pl

Lecturers

Prerequisites

Knowledge of experimental physics and basic specialized knowledge in the area of functional materials thermodynamics. Ability to solve physical problems on the basis of acquired knowledge, ability to gather information from specified sources. Understanding of the need to constantly expand one's competencies.

Course objective

To deepen theoretical and practical knowledge in the area of the selected thesis topic and to solve relevant engineering problems within the scope of the thesis work. The main goal is for the student(s) to independently (or in teams) implement complex program content outlined in the dedicated diploma thesis card for the given student(s).

Course-related learning outcomes

Knowledge:

Teaching students to use acquired knowledge and skills to solve technical and scientific problems, to

perform measurements, and to interpret obtained results along with evaluating their uncertainty (measurements errors)

Developing skills in using literature sources and citing them

Developing skills in creating professional research reports

Skills:

As a result of the course, the student should be able to:

Design and build accessories for measurement systems, perform tests, and measure quantities that are characterizing functional materials

Independently perform preliminary analysis of measurement results based on literature and draw conclusions

Independently prepare a written thesis and efficiently present an oral presentation in Polish with a description of the measurement system and well-documented and interpreted measurement results

Social competences:

As a result of the course, the student will gain the following competencies:

Ability to work independently on the assigned task, showing responsibility in this work

Responsibility for the accuracy of the obtained results

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Evaluation of the individual oral presentation using multimedia programs and assessment of responses to questions related to the presentation. Evaluation of student participation in the discussion during the seminar and engagement in preparing the presentation.

Programme content

Detailed issues related to the defense procedure of the master's thesis. Topics related to the individual thesis subject matter.

Course topics

Principles of preparing diploma theses.

Guidelines for preparing presentations in PowerPoint or similar software.

Additional content depending on the topic of the engineering thesis.

Teaching methods

Solving engineering problems using appropriate devices, engineering and programming instrumentation and software; analyzing and discussing the results of one's work in relation to current literature.

Bibliography

Basic:

Individually selected, according to the topic of the thesis and performed research tasks.

Additional:

Individually selected, according to the topic of the thesis and performed research tasks.

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,00
Classes requiring direct contact with the teacher	15	0,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	85	3,50
