#### POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

## **COURSE DESCRIPTION CARD - SYLLABUS**

Course name

Basics of engineering structures [S1FT2>PKI]

Course

Field of study Year/Semester

**Technical Physics** 2/4

Area of study (specialization) Profile of study

general academic

Level of study Course offered in

first-cycle Polish

Form of study Requirements full-time compulsory

Number of hours

Lecture Laboratory classes Other 0

30

**Tutorials** Projects/seminars

0 15

Number of credit points

3.00

Coordinators Lecturers

dr hab. inż. Michał Śledziński michal.sledzinski@put.poznan.pl

## **Prerequisites**

Basic knowledge of physics (mechanics) and mathematics. Basic knowledge from engineering graphics the ability to make sketches and drawings in the rectangular projection; Performing cross-sections and complexial drawings of simple machine assemblies; dimensioning rules. Basic knowledge of mechanics and strength of the materials - analysis of the state of load and stress of elements, elementary strength calculations.

#### Course objective

Explaining students general principles of engineering structures. Obtaining knowledge and understanding of the process of constructing simple mechanical devices.

## Course-related learning outcomes

#### Knowledge:

- 1. The student has ordered basic knowledge of the general principles of engineering structures
- 2. The student has detailed knowledge about selected connections and teams in engineering constructions; He knows and understands the process of constructing simple mechanical devices
- 3. The student knows the rules of engineering graphics and technical drawing and basic elements

#### standardized in machine construction

#### Skills:

- 1. The student can identify the technical problem and propose its solution and design selected elements and simple mechanical constructions
- 2. The student can perform simple strength calculations and draw and dimension the basic elements of the engineering structure
- 3. The student can choose materials with appropriate design properties for selected engineering applications

#### Social competences:

- 1. The student can work responsibly and creatively on the designated task, independently and in the team
- 2. The student is aware and understands the importance of the effects of engineering activities, including the environmental impact and the related responsibility for the decisions taken

## Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: crediting based on general and structural knowledge, at the end of the semester. Assessment criteria: knowledge of the structural features of engineering connections and devices and simple strength calculations.

Project classes: credit based on an individual design task of a simple device and the implementation of selected elements of construction documentation. Assessment criteria: correct execution of strength calculations, assembly drawing and selected executive drawings and their dimensioning.

## **Programme content**

- 1. Design methodology
- 2. Identification of load and stress state in machine elements
- 3. Analysis of operation and kinematics of basic machine parts. Forming the structural design.
- 4. Analysis of design variants. Strength calculations.
- 5. Design of basic structural nodes. Selection of structural materials. Standardised elements.
- 6. Connections and assemblies in machine construction
- 7. Creating design documentation

#### Course topics

Lecture programme covers the following topics:

- 1. Modern approach to design design thinking. Engineering design.
- 2. Stages of project task implementation.
- 3. Principles of construction. Requirements for constructions.
- 4. Analysis of structural stability.
- 5. Computer-aided design. Heuristics and bionics.
- 6. Connections in engineering structures permanent and separable connections. Characteristics.

Principles of design and calculation. Joining techniques. Technological aspects of connections.

- 7. Screw connections and mechanisms. Threads parameters and properties. Stress distributions. Calculation algorithm.
- 8. Bearing assemblies in machine construction. Design and selection of bearings.
- 9. Machine assemblies shaping structural features, properties, and design.

#### Project programme covers the following topics:

- 1. Analysis of kinematic schemes, geometry, and load state of screw-nut drive systems.
- 2. Determining forces in structural elements.
- 3. Selection of structural materials.
- 4. Strength calculations of structural assemblies.
- 5. Selection of standardised dimensions.
- 6. Selection of standardised elements, working with standards.
- 7. Determining the safety margin of the screw-nut system.
- 8. Analysis of shaped connections.

9. Creating design documentation for the designed device: calculations, assembly drawings, and detailed drawings.

## **Teaching methods**

Lecture: multimedia presentation, supplemented with teaching aids.

Project classes: Student's design work (individual and team). Presenting construction progress.

Discussion. Project correctness control

# **Bibliography**

# Breakdown of average student's workload

	Hours	ECTS
Total workload	75	3,00
Classes requiring direct contact with the teacher	45	2,00
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation)	30	1,00
