

COURSE DESCRIPTION CARD - SYLLABUS

Course name

English [S1IBio1>JA2]

Course

Field of study

Biomedical Engineering

Year/Semester

2/3

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

Polish

Form of study

full-time

Requirements

elective

Number of hours

Lecture

0

Laboratory classes

0

Other

0

Tutorials

60

Projects/seminars

0

Number of credit points

5,00

Coordinators

mgr Karolina Calka

karolina.calka@put.poznan.pl

Lecturers

Prerequisites

Student should already have acquired language competence compatible with level B1 (CEFR). Student should also have the ability to use vocabulary and grammatical structures required on the high school graduation exam with regard to productive and receptive skills. Additionally, the student should be able to work individually and in a group and use various sources of information and reference works.

Course objective

Advancing students' language competence towards at least B2 level (CEFR). Development of the ability to use academic and field specific language effectively in both receptive and productive language skills. Improving the ability to understand field specific texts and to function effectively on an international market and in a daily basis situations.

Course-related learning outcomes

Knowledge:

5. Anatomy

6. Biomechatronics

7. Prosthetics

8. Artificial Heart
9. Cochlear Aids
10. Medical imaging
11. Targeted drug delivery systems.

Skills:

As a result of the course, the student is able to:

1. Give a talk/presentation on field specific and popular science topic (in English), and discuss general and field specific issues using an appropriate linguistic and grammatical repertoire
2. Express basic mathematical formulas and interpret data presented on graphs/diagrams
3. Formulate a text in English on a selected field specific topic

Social competences:

As a result of the course, the student is able to communicate effectively in a field specific/professional area, and to give a successful presentation in English. The student is also able to recognize and understand cultural differences in a professional and private conversation, and in a different cultural environment.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

The knowledge acquired during classes is verified by at least two pre-announced tests per semester. Each test consists of questions (multiple choice and open questions) with different points. Passing threshold is 60%. Additionally, once a year, students prepare a presentation on a selected field related topic and receive points for class activity.

Programme content

1. Definition and the scope of research of biomedical engineering and related fields of science
2. Knowledge of materials, including biomaterials
3. Recycling
3. Mechanics, electrical engineering
5. Health and safety
4. Medical instruments and tests
5. Basics of mathematics and graph description
6. Elements of bioethics.

Course topics

1. Basics of anatomy
2. Biomechatronics
3. Introduction to prosthetics
4. Bionics
5. Cochlear implants and hearing aids
6. Types of diagnostic imaging
7. Targeted drug delivery

Teaching methods

Vocabulary exercises, multimedia presentations, audiovisual materials, discussion of issues with examples on the blackboard, solving lexical and grammar exercises, integration and language games, discussion panels, pair/team work, individual student work (reading comprehension, listening comprehension).

Breakdown of average student's workload

	Hours	ECTS
Total workload	125	5,00
Classes requiring direct contact with the teacher	62	2,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	63	2,50
