POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Techniques of vehicles diagnosis [N1MiBP1>TDP]

Course				
Field of study Mechanical and Automotive Engineering		Year/Semester 3/6		
Area of study (specialization)		Profile of study general acader	nic	
Level of study first-cycle		Course offered Polish	in	
Form of study part-time		Requirements elective		
Number of hours				
Lecture 9	Laboratory class 18	es	Other 0	
Tutorials 0	Projects/seminal 0	rs		
Number of credit points 3,00				
Coordinators		Lecturers	irers	
dr hab. inż. Grzegorz Szymań grzegorz.m.szymanski@put.p	ski prof. PP oznan.pl			

Prerequisites

Basic knowledge of mechanics, metrology, strength of materials and machine construction. Can use the scientific method in problem solving, experimentation and inference. He knows the limitations of his own knowledge and skills; is able to precisely formulate questions, understands the need for further education

Course objective

Learning methods and acquiring practical skills in solving tasks in the field of vehicle diagnostics.

Course-related learning outcomes

Knowledge:

Has basic knowledge of the basics of machine design and the theory of machines and mechanisms, including mechanical vibrations.

Has basic knowledge of the strength of materials, including the basics of the theory of elasticity and plasticity, stress hypotheses, calculation methods for beams, membranes, shafts, joints and other simple structural elements, as well as methods of testing the strength of materials and the state of deformation and stress in mechanical structures.

Has extended basic knowledge necessary to understand specialist subjects and specialist knowledge

about the construction, construction methods, manufacturing and operation of a selected group of working, transport, thermal and flow machines covered by the diploma path.

Skills:

Can obtain information from literature, the Internet, databases and other sources. Can integrate the obtained information, interpret and draw conclusions from it, and create and justify opinions. Can properly use modern equipment for measuring major physical quantities, used in machine research and production control.

Can use learned mathematical theories to create and analyze simple mathematical models of machines and their elements, and simple technical systems.

Social competences:

Is ready to critically assess his knowledge and received content

Is ready to fulfill social obligations and co-organize activities for the benefit of the social environment. Is willing to think and act in an entrepreneurial manner.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

The knowledge acquired during the lecture is verified by a 45-minute test carried out during the 15th lecture. Kolokwim consists of questions (test and open), with different scores. Passing threshold: 50% of points.

Programme content

.Introduction to technical diagnostics. Test and measurement techniques used in vehicle diagnostics. Diagnostics of basic machine components.

Course topics

Introduction to technical diagnostics. Functional and technical diagnostics. Physico-chemical processes as a carrier of information about the condition of vehicles. Vehicle condition assessment, assessment criteria. Research and measurement techniques used in vehicle diagnostics. Modeling in diagnostic tests. Diagnostics of basic machine elements (shafts, bearings), gear transmissions, rotating machines, piston machines

Teaching methods

1. Lecture: multimedia presentation, illustrated with examples given on the board.

2. Laboratory exercises: a multimedia presentation, a presentation illustrated with examples given on the blackboard and the implementation of tasks given by the teacher - practical exercises.

Bibliography

Basic

1. R.B. Randall: Vibration based condition monitoring, Wiley, 2011.

2. Niziński S. Michalski R.: Diagnostyka obiektów technicznych. Monograficzna seria wydawnicza Biblioteka Problemów Eksploatacji, Warszawa - Sulejówek - Olsztyn - Radom, 2002.

3. J. Marciniak: Diagnostyka techniczna kolejowych pojazdów szynowych. WKiŁ, Warszawa 1982.

4. M. Hebda, S. Niziński, H. Pelc: Podstawy diagnostyki pojazdów mechanicznych. WKiŁ, Warszawa 1980.

5. C. Cempel, F. Tomaszewski: Diagnostyka Maszyn. Zasady ogólne, przykłady zastosowań. M.C.N.E.M.T, Radom 1992.

6. B. Żółtowski: Podstawy diagnostyki maszyn. Wydawnictwo. Uczelniane Akademii Techniczno-Rolniczej w Bydgoszczy, Bydgoszcz 1996.

7. R. A. Collacot: Mechanical Fault Diagnosis and Condition Monitoring. Chapman and Hall, London 1977. Additional

1. W Tłaczała: Środowisko LabVIEWTM w eksperymencie wspomaganym komputerowo, WNT 2002

Breakdown of average student's workload

	Hours	ECTS
Total workload	75	3,00
Classes requiring direct contact with the teacher	27	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	48	2,00
