POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

COURSE DESCRIPTION CARD - SYLLABUS

Course name
Mathematics [S1TCh2>MAT2]

Course

Field of study Chemical Technology	**Year/Semester** 1/2
Area of study (specialization) –	**Profile of study** general academic
Level of study first-cycle	**Course offered in** Polish
Form of study full-time	**Requirements** compulsory

Number of hours

Lecture 30	**Laboratory classes** 0	**Other** 0
Tutorials 30	**Projects/seminars** 0	

Number of credit points

5,00

Coordinators	**Lecturers**
dr inż. Agnieszka Szawioła agnieszka.szawiola@put.poznan.pl	

Prerequisites

Student has basic knowledge of elementary functions, algebraic operations, analytical geometry, trigonometry and mathematical analysis. Students should be able to solve simple rational equations and inequalities, to give domains of elementary functions and to know their curves. Students seriously treat the process of studying.

Course objective

The aim of subject is introduction to complex numbers and their some practical applications. Differential and integral calculus of one variable are presented together with their applications in mathematics and chemistry.

Course-related learning outcomes

Knowledge:
After completing the first degree studies, the graduate has expanded and in-depth knowledge of various branches of higher mathematics and detailed knowledge on the application of mathematical methods and tools in engineering and chemical sciences - K_W2

Skills:
After completing the first degree studies, the graduate:
- can use knowledge of higher mathematics; can build and analyse simple mathematical models; can use mathematical tools and methods, including numerical ones, to solve engineering problems - K_U13
- is able to plan and implement self-education independently in order to raise and update their competences - K_U24

Social competences:
After completing the first degree studies, the graduate:
- is aware of the deepening and expansion of knowledge to solve newly created technical problems - K_K1
- understands and appreciates the importance of intellectual honesty in own and other people's actions; is ready to demonstrate reliability, impartiality, professionalism and an ethical attitude - K_K1

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture - written exam during session
Tutorials - one long test + short tests (15 minutes) + activity
Assessment criteria:
below 51% =2,0 51%-65% =3,0 66%-75% = 3,5
76%-85%= 4,0 86%-91% = 4,5 92%-100% = 5,0

Programme content

Matrices of numbers.
Solutions of of linear algebraic equations
Vectors in space R3.
A function of many variables.
Diffterentials of function.
Ordinary differential equations of I and II order.

Course topics

1. Matrices. Arithmetic operations for matrices. Determinants of matrices (Laplace's expansions with respect to rows or columns). Properties of determinants. Inverse matrices.
2. Solutions of Cramer's systems of linear algebraic equations using determinants and inverse matrices.
3. Rank of matrices. Kronecker-Capelli theorem.
4. Gauss-Jordan elimination method of solving systems of linear algebraic equations (systems with one solution, with infinitely many solutions or without solutions). Inverse matrices obtained by Gauss-Jordan elimination procedure.
5. Vectors in space R3. Operations on vectors (also using their coordinates) . Dot product of two vectors and the criterium of orthogonality of two vectors. Cross product and the criterium of parallelity of two vectors. Triple product. Applications of products for calculating areas of parallelograms and triangles, and volumes of tetrahedrons and parallelepipeds.
6. Definition of the function of many variables. Geometric interpretation of function of two variables. Domain of functions. Partial derivatives of I and II order of function of two and three variables. Schwarz's theorem about mixed derivatives. Gradient of functions.
Differentials of function - some applications.
7. Local extrema of functions of two and three variables. The smallest and the greatest values of functions on some regions.
8. Double integrals over rectangles. Iterated integrals.
9. Double integrals over regions normal with respect to: the axis OX, the axis OY. Change of variables in double integrals.
10. Geometric interpretation of double integrals. Applications of the double integral in geometry and physics.
11. Ordinary differential equations of I and II order: introduction. Solutions of ODE of I order with separated variables, homogeneous, linear nonhomogeneous (Lagrange's method) Solutions of ODE of II order which can be transformed to ODE of I order and equations of II order with constant coefficients - method of undetermined coefficients.

Teaching methods

Lecture - multimedial presentation + examples on the blackboard
Tutorials - solving problems; discussion about obtained results

Bibliography

Basic:

Breakdown of average student's workload

	Hours	ECTS
Total workload	125	5,00
Classes requiring direct contact with the teacher	64	2,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	61	2,50
