POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Decision problems in logistics II [S2Trans1-LogTr>PDwL2]

Course					
Field of study Transport		Year/Semester 1/2			
Area of study (specialization) Logistics of Transport		Profile of study general academic	>		
Level of study second-cycle		Course offered in Polish			
Form of study full-time		Requirements compulsory			
Number of hours					
Lecture 0	Laboratory class 0		Other 0		
Tutorials 0	Projects/seminar 15	S			
Number of credit points 2,00					
Coordinators		Lecturers			
dr inż. Paweł Zmuda-Trzebiatowski pawel.zmuda-trzebiatowski@put.poznan.pl					

Prerequisites

Knowledge:student has basic knowledge in the field of mathematics, operational research and transport and management, as well as knowledge in the subject of Decision Problems in Logistics I Skills: student is able to integrate the obtained information, make their interpretation, draw conclusions, formulate and justify the opinions of the ability to see, associate and interpret phenomena, and also has the skills in the subject of Decision Problems in Logistics I Social competencies: the student is aware of the importance and nontechnical understanding (including in particular economic and social) aspects and effects of transport activities and decisions taken

Course objective

The solution of a real decision problem which may occurr in logistics

Course-related learning outcomes

Knowledge:

1. has detailed knowledge of selected issues in the field of transport engineering

2. knows advanced methods, techniques and tools used to solve complex engineering tasks and conduct research in a selected area of transport

Skills:

1. can plan and carry out experiments, including measurements and simulations, interpret the results obtained and draw conclusions and formulate and verify hypotheses related to complex engineering problems and simple research problems

2. can - using e.g. conceptually new methods - solve complex tasks in the field of transport engineering, including atypical tasks and tasks containing a research component

Social competences:

1. understands the importance of using the latest knowledge in the field of transport engineering in solving research and practical problems

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows: The prepared project is evaluated

Programme content

In this course, students will face in practice selected decision-making problems that are solved in transport and forwarding companies.

Course topics

Examples of projects may include issues such as the preparation of cargo loading standards for containers as well as different instances of problems encountered in the first part of the course.

Teaching methods

Lecturing, demonstrating, collaborating

Bibliography

Basic

1. Presentations from the lecture "Decision problems in logistics I"

Breakdown of average student's workload

	Hours	ECTS
Total workload	40	2,00
Classes requiring direct contact with the teacher	15	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	25	1,00
