POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Metal science with heat treatment [S1Trans1>MzOC]

Course			
Field of study Transport		Year/Semester 1/2	
Area of study (specialization)		Profile of study general academi	с
Level of study first-cycle		Course offered ir Polish	1
Form of study full-time		Requirements compulsory	
Number of hours			
Lecture 30	Laboratory classe 15	es	Other 0
Tutorials 0	Projects/seminar 0	S	
Number of credit points 3,00			
Coordinators		Lecturers	
prof. dr hab. inż. Leszek Małdziń leszek.maldzinski@put.poznan.p	ski Dl		

Prerequisites

Knowledge: Basic knowledge of metallurgy and heat treatment of metals: construction of metals and alloys, carbon and alloy steels, non-ferrous metal alloys, steel corrosion, properties and practical application.

Course objective

Knowledge of the theoretical foundations of metals and their alloys. Understanding the basics of heat treatment and thermochemical properties of steels and metals and their alloys. Knowing the grades of unalloyed and alloy steels, cast steels, cast irons and selected non-ferrous metal alloys: their physical and functional properties and their application in practice.

Course-related learning outcomes

Knowledge:

The student has ordered and theoretically founded general knowledge in the field of key issues of technology and detailed knowledge in the field of selected issues in this discipline of transport engineering

Skills:

Student is able, when formulating and solving tasks in the field of transport, to apply appropriately selected methods, including analytical, simulation or experimental methods The student is able - in accordance with the given specification - to design (create a model of a fragment

of reality), formulate a functional specification in the form of use cases, formulate non-functional requirements for selected quality characteristics) and implement a device or a widely understood system in the field of means of transport, using appropriate methods, techniques and tools

Social competences:

The student is aware of the importance of knowledge in solving engineering problems, knows examples and understands the causes of malfunctioning transport systems that have led to serious financial and social losses or to serious loss of health and even life

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows: Written and oral exam

Programme content

General characteristics of materials. Importance of materials in product manufacturing processes; manufacturing processes, materials used in manufacturing processes.

Basic groups of engineering materials; metals and their alloys, polymers, ceramics, composites. The structure of metals

Structure of matter; matter and its components, structure of the atom, classification of chemical elements, bonds between atoms.

The actual structure of metals; classification of crystal structure defects, point defects, dislocations, interaction between dislocations, polycrystalline structure of metals, grain boundaries and boundaries interphase, the effect of defects in the crystal structure on the properties of metals.

Metal alloys and their structure Iron alloys with carbon Carbon cast iron. Heat treatment of metal alloys. Alloys steel. Non-ferrous metals and their alloys. Corrosion of metals and alloys

Course topics

none

Teaching methods

Lecture with multimedia presentation. Laboratory classes.

Breakdown of average student's workload

	Hours	ECTS
Total workload	75	3,00
Classes requiring direct contact with the teacher	45	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	30	1,00
