POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Power plants and heat power plants [S2ZE1E>EiE]

Course				
Field of study Green Energy		Year/Semester 1/1		
Area of study (specialization)		Profile of study general academic	с	
Level of study second-cycle		Course offered in English	1	
Form of study full-time		Requirements compulsory		
Number of hours				
Lecture 15	Laboratory classe 30	es	Other 0	
Tutorials 15	Projects/seminars 0	6		
Number of credit points 4,00				
Coordinators dr inż. Daria Złotecka daria.zlotecka@put.poznan.pl		Lecturers		

Prerequisites

The student has basic knowledge of the basics of energy transformations and the construction and principles of operation of energy machines and devices. He knows the basics of electrical engineering and energy. He understands the principles of operation of basic machine parts and knows the construction of basic conventional energy devices. The student is aware of the need to expand his competences and is ready to cooperate as part of the team

Course objective

Acquiring the skills of mathematical modeling of technological systems of power plants and CHP plants and obtaining the ability to determine the values of operational indicators.

Course-related learning outcomes

Knowledge:

Student knows the principles of constructing mathematical models intended for energy analysis of technological systems of power plants and heat and power plants.

Student has knowledge of the methods of improving the efficiency of the process of converting primary energy into electricity.

Skills:

The student is able to model the technological system of power plants and combined heat and power plants with the use of appropriate tools.

The student is able to carry out technical and economic analyzes and make a comparison of selected technological systems

Social competences:

The student is aware of the importance of the power industry for the country and society, and understands the need to reduce the negative impact of the manufacturing sector on the environment. The student understands the need to make the society aware of the development of the power generation sector.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture

- evaluation of the knowledge and skills listed on the written exam,

Tutorials

- credit on the basis of the current check messages and one written tests of the accounting tasks Laboratory classes

- assessment of knowledge and skills related to the implementation of the tasks your practice, the assessment of report of performed exercise,

- obtaining additional points for the ability to work within a team practice performing the task detailed in the laboratory and developed aesthetic diligence reports.

Programme content

The module programme includes:

- technological systems of power plants and combined heat and power plants (CHPs),
- thermal systems and operating parameters of combined heat and power plants (CHPs).

Course topics

The lecture programme includes:

- challenges for energy systems connected with European and national energy policy,
- technological systems of steam power plants working on subcritical and supercritical steam parameters,
- technological systems of steam CHPs,
- technological systems of gas-fired power plants and CHPs,
- technological systems of combined cycle gas turbine power plants and CHPs,
- technological systems of nuclear power plants and CHPs.

The tutorials programme includes:

- energy calculations of technological systems of power plants and CHPs.

The laboratory classes programme includes:

- modeling of technological systems of steam power plants and combined heat and power plants (coal-fired and nuclear) in specialized engineering software,

- modeling of technological systems of gas and combined cycle power plants and combined heat and power plants in specialized engineering software.

Teaching methods

Lecture

Lecture with multimedia presentation supplemented with examples given on the board. Tutorials

Tutoriais

Tasks counted on the board.

Laboratory classes

Laboratory exercises performed with the help of engineering programs.

Bibliography

Basic: Dipak Sarkar - Thermal Power Plant, 1st Edition - August 20, 2015 Xingrang Liu, Ramesh Bansal - Thermal Power Plants: Modeling, Control, and Efficiency Improvement, CRC Press; 1st edition (June 30, 2020) Ajay Kumar Debnath, Swapan Basu - Power Plant Instrumentation and Control Handbook : A Guide to Thermal Power Plants, Elsevier Science Publishing Co Inc

Additional:

Thermal Power Plants Handbook - ML Books International - IPS, 2016

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,00
Classes requiring direct contact with the teacher	60	2,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	40	1,50
