

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Computer aided design with BIM [S1BZ1E>KWPzEBIM]

Course

Field of study

Sustainable Building Engineering

Year/Semester

2/4

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

English

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

30

Laboratory classes

30

Other

0

Tutorials

0

Projects/seminars

0

Number of credit points

4,00

Coordinators

prof. dr hab. inż. Wojciech Sumelka
wojciech.sumelka@put.poznan.pl

Lecturers

Prerequisites

- basic knowledge in the field of mathematics and physics - basic knowledge in the field of computer science and programming - uses available sources of information - can solve basic engineering problems - can work in a team

Course objective

The main goal is to collect, systematize and order numerical methods for solving differential equations in the context of engineering problems in the field of construction and environmental engineering, methods for creating numerical models of phenomena and objects, with particular emphasis on formulating a problem, choosing a solution method and assessing accuracy. The practical goal is to acquire the ability to solve common problems with generally available IT tools (eg spreadsheets, scilabs) but also with the use of specialized software based on the finite element method or the finite difference method.

Course-related learning outcomes

Knowledge:

-have knowledge in the fields of mathematics, physics, chemistry, biology and other fields of sciences
suitable to formulate and solve problems concerning sustainable building engineering (civil engineering,

environmental engineering and architecture).

-have detailed knowledge in theoretical mechanics, knowledge of materials' strength, and general rules of shaping structures.

-have basic knowledge of operation algorithms of selected software (including the usage of BIM technology), supporting the calculation and design of constructions, construction work organisation, cost estimation, technical fitting of buildings; basic knowledge of operation algorithms of software dedicated for evaluation and design of energy-saving buildings.

Skills:

-are able to obtain information from literature, databases and other properly selected information sources; can integrate the obtained information, interpret and evaluate it, as well as draw conclusions, formulate, discuss and justify opinions.

-are able to use advanced information and communication technologies (ICT) appropriate to perform typical engineering tasks.

-are able to correctly utilise numerical, analytical, simulation, and experimental methods, to identify and solve problems in sustainable building engineering; to obtain and verify the results.

-can utilize selected software supporting design decisions in sustainable building engineering, including programs based on the BIM technology; are able to critically evaluate the obtained results of numerical analysis of building unit.

Social competences:

-are able to adapt to new and changing circumstances, can define priorities for performing tasks defined by themselves and other people, acting in the public interest and with regard to the purposes of sustainable development.

-take responsibility for the accuracy and reliability of working results and their interpretation.

-are able to critically evaluate the results of their own work..

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

-Colloquium in the form of open questions or if test was chosen on 20 questions.

-Design.

-Assessment of participation and activity in classes.

Programme content

Approximate solution of differential equations - weighted residue methods. Introduction to the finite element method of the tool for modeling and strength analysis of engineering structures. Assumptions and derivation of equations describing basic flat rod structures. 1D bar element, 2D truss element and 2D beam element. Introduction to the CALFEM calculation system. Optimization of bar structures. Problems of plane stress (PS) and plane strain (PE), triangular finite element CST and LST, quadrangular finite elements for PSN and PSO, isoparametric formulation of elements in 2D, numerical integration. Structure optimization in flat deformation and stress states.

Course topics

Lectures:

1 - Introduction; ODE and PDE in Civil Engineering.

2 - Determination of the 1D heat flow (boundary value problem); weighted residual method (Galerkin approach).

3 - Introduction to the finite element method.

4 - Elasticity - 1D finite element

5 - Elasticity - 2D and 3D truss element

6 - Determination of displacements, strains and stresses in truss structures; FEM-BVP.

- 7 - Elasticity - 2D beam element
- 8 - Elasticity - 3D beam element
- 9 - Determination of displacements, strains and stresses in beam and frame structures; FEM-BVP.
- 10 - Frame dynamics and stability
- 11 - Determination of eigenvalues and eigenvectors in beam and frame structures; FEM-BVP
- 12 - Elasticity - plane stress/strain state - CST, LST finite elements
- 13 - Determination of displacements, strains and stresses in a plane stress/strain state; FEM-BVP
- 14 - Introduction to optimization of engineering structures
- 15 - Final Assessment

Laboratories:

- 1. Introduction
- 2. Displacements in beams
- 3. Introduction to CalFem
- 4. Truss FEM - CalFem
- 5. Introduction to selected commercial software (e.g. Soldis PROJEKTANT or Robot)
- 6. Truss FEM- commercial software (e.g. Soldis PROJEKTANT or Robot)
- 7. Beam FEM - CalFem
- 8. Beam FEM - commercial software (e.g. Soldis PROJEKTANT or Robot)
- 9. Frame FEM - CalFem
- 10. Frame FEM- commercial software (e.g. Soldis PROJEKTANT or Robot)
- 11. PS/PE MES - CalFem
- 12. PSN/PSO MES - commercial software (e.g. Soldis PROJEKTANT or Robot)
- 13. Heat flow
- 14. 2D heat flow FEM - CalFem
- 15. Assessment

Teaching methods

Lecture with multimedia presentation.
Laboratory - task solving.

Breakdown of average student's workload

	Hours	ECTS
Total workload	120	4,00
Classes requiring direct contact with the teacher	60	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	60	2,00
