

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Diploma seminar [S1Elmob1>SD1]

Course

Field of study
Electromobility

Year/Semester
3/6

Area of study (specialization)
–

Profile of study
general academic

Level of study
first-cycle

Course offered in
Polish

Form of study
full-time

Requirements
compulsory

Number of hours

Lecture
0

Laboratory classes
0

Other
0

Tutorials
0

Projects/seminars
15

Number of credit points

2,00

Coordinators

prof. dr hab. inż. Wojciech Szelaĝ
wojciech.szelaĝ@put.poznan.pl

Lecturers

Prerequisites

Student which starting this subject should have basic knowledge, skills (including performing calculations and measurements of electrical and non-electrical quantities, writing simple computer programs, designing and building simple electrical systems in the field of electrical engineering) and competences (including verbal communication and teamwork) acquired in earlier years of study that enable the realization of an engineering diploma thesis.

Course objective

The aim of the course is to explain the essence of an engineering diploma thesis, to present the issues proposed in the diploma theses in the field of electrical engineering, to choose the topic of the diploma thesis by students, and also to learn the principles of its editing and conducting literature recognition in the field of thesis.

Course-related learning outcomes

Knowledge:

1. has knowledge of the latest solutions used in the electrical engineering in the context of the subject of the thesis

2. has knowledge of the basic techniques, methods and tools used in the implementation of engineering tasks in the field of thesis being implemented
3. has knowledge of the general principles of ethics, copyright and related rights in relation to the thesis being carried out
4. has knowledge about the method of preparing an engineering project in the energy field

Skills:

1. knows how to find useful literature sources (also in English) and make a critical assessment of their usefulness in the subject of the engineering work
2. knows how to correctly cite the relevant literature
3. knows how to prepare and, in a manner understandable to a wide audience, to present an oral presentation in the field of electrical engineering
4. knows how to use the acquired knowledge to creatively analyze and solve various engineering problems in the field of electrical engineering

Social competences:

Is aware of the responsibility for their own work, is open to exchange of views, accepts critical comments on the subject of own research

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Knowledge and skills acquired as part of the seminar classes are verified by:

- observation and assessment of class activity, especially during discussions on analyzed issues
- assessment of knowledge and skills needed to implement an individual topic of engineering work based on a written paper (each student prepares a paper of 10 pages)
- assessment of the content and presentation form of the overall topic of engineering work
- observation and assessment of student work regularity

Programme content

Basic issues related to the preparation of an engineering diploma thesis, preparation for scientific research and presentation of the principles and elements of the diploma examination.

Course topics

Characteristics of an engineering diploma thesis. Discussion of the proposed thematic areas of diploma theses. Discussion of the structure of an engineering diploma thesis as well as editorial guidelines and recommendations (document formatting, graphic elements). Rules for preparing a presentation on the topic of work. Methods of searching for literature in modern databases and rules of its citation. Discussion of the elements of scientific research methodology and the principles of carrying out research conducted for the purposes of engineering thesis (as part of the course, students present one paper that will be related to the issues of the diploma thesis). Participation in scientific research conducted at the supervisor's institute related to the field of Electromobility (using PP library resources - databases of scientific journals Emerald Engineering, IEEE/IEE Electronic Library (IEL), ScienceDirect/Elsevier/ICM, Springer/ScienceDirect/ICM - student groups prepare a written review of scientific literature related to the scientific topic assigned by the instructor). Basics of copyright and related rights.

Teaching methods

Multimedia presentation supplemented with comments and examples given on the board, analysis / discussion of various methods (including unconventional) solutions of exemplary problems and specific problems indicated in the topics of theses of individual students, taking into account various aspects of the problems solved: technical, economic, ecological, legal and social.

1. Detailed guidelines for editing the diploma thesis developed at the Promoter Institute
2. Specialist literature about work topics

Bibliography

Basic:

1. Detailed guidelines for editing the diploma thesis developed at the Promoter Institute

2. Specialist literature about work topics

Additional:

1. Exemplary engineering diploma theses

Breakdown of average student's workload

	Hours	ECTS
Total workload	53	2,00
Classes requiring direct contact with the teacher	15	0,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	38	1,50
