

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Time management [S2EPiO1>ZC]

Course

Field of study	Year/Semester
Industrial and Renewable Energy Systems	1/2
Area of study (specialization)	Profile of study
Thermal and Renewable Energy	general academic
Level of study	Course offered in
second-cycle	Polish
Form of study	Requirements
full-time	elective

Number of hours

Lecture	Laboratory classes	Other
15	0	0
Tutorials	Projects/seminars	
0	15	

Number of credit points

2,00

Coordinators

dr inż. Rafał Mierzwiak
rafal.mierzwiak@put.poznan.pl

Lecturers

Prerequisites

The student has basic knowledge of the humanities. He also has basic skills in analysis and searching for information for the purposes of professional practice. The student recognizes the importance of organizing own work as a component of effective functioning in professional and social environment.

Course objective

The aim of the course is to acquire knowledge and skills in the field of proper organization of tasks over time. As a result of its implementation, students will acquire the ability to create their own effective and efficient system of organizing tasks in the context of professional and non-professional work.

Course-related learning outcomes

Knowledge:

1. the student has basic knowledge necessary to understand social, economic, legal and other non technical conditions of engineering activity, including the principles of sustainable development within the conducted subject, especially in relation to management sciences
2. the student has basic knowledge of management, including quality management and conducting business activity in the field of environmental engineering within the conducted subject.

3. the student knows the general principles of creating and developing forms of individual entrepreneurship, using the knowledge of environmental engineering within the conducted subject, especially in relation to time management issues.

Skills:

1. the student is able to obtain information from literature, databases and other appropriately selected sources, also in english or another foreign language considered to be the language of international communication in the field of environmental engineering; he or she can integrate information obtained, interpret it, as well as draw conclusions and formulate and justify opinions;
2. the student is able to interact and work in a group, assuming different roles in it, and is able to determine appropriate priorities for realization of tasks defined by him/her or others; especially in relation to time management issues
3. the student has the ability to self-study; he/she understands the need for lifelong learning

Social competences:

1. the student is aware of the responsibility for making decisions concerning the subject matter of the
2. the student is prepared to think and act in an entrepreneurial way
3. the student is aware of the social role of a technical university graduate, is prepared to formulate and convey information and opinions on technical achievements and other aspects of engineering activity in a commonly understood way
4. the student is aware of the need to maintain ethical standards resulting from the social role of a technical university graduate

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Conditions for passing this course are as follows:

1. Written examination, minimum pass mark is 51% of the maximum number of points
2. Evaluation of the credit project

Programme content

The characteristics of modern time management conditions. Elements of praxeology in task organization. Contemporary concepts and methods of time management. Time management system based on the concepts of 7 effective action habits. Methods of planning and scheduling activities. Methodology of network thinking in project planning. Selected problems of forecasting. Goal management. Kaizen philosophy.

Project: introduction to project management, organisation of projects in a cascade model, agile methodologies in project management, kanban method in project management

Course topics

Lecture

1. Introduction and Contemporary Conditions of Time Management
2. Fundamentals of Praxeology in Task Organization
3. Modern Concepts and Methods of Time Management
4. The System of 7 Habits of Highly Effective People
5. Planning, Scheduling, and Network Thinking
6. Goals, Forecasting, and Continuous Improvement
7. Project Management and Summary

Project :description of the project problem, project structuring
identification of activities and Gantt chart, critical path, project costs

Teaching methods

Lecture: informative lecture - multimedia presentation illustrated with examples given on the board

Project: classes will be conducted in the form of a workshop supplemented by a seminar lecture .

Breakdown of average student's workload

	Hours	ECTS
Total workload	94	3,00
Classes requiring direct contact with the teacher	55	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	39	1,00
