

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Safety of social engineering systems [S2IBiJ1-JiEwBP>BUS]

Course

Field of study

Safety and Quality Engineering

Year/Semester

2/3

Area of study (specialization)

Quality and Ergonomics in Work Safety

Profile of study

general academic

Level of study

second-cycle

Course offered in

Polish

Form of study

full-time

Requirements

elective

Number of hours

Lecture

15

Laboratory classes

0

Other

0

Tutorials

15

Projects/seminars

15

Number of credit points

3,00

Coordinators

dr inż. Aleksandra Dewicka-Olszewska

aleksandra.dewicka-olszewska@put.poznan.pl

Lecturers

Prerequisites

The student has basic knowledge of ergonomics and management. Can properly analyze the causes and course of ergonomic phenomena and interpret the results of these observations.

Course objective

Acquiring knowledge and skills in the practical application of technical issues, the possibilities of social sciences and planning, as well as effective creation of social changes in the areas of work safety, quality and ergonomics.

Course-related learning outcomes

Knowledge:

1. Student knows in depth the methods and theories used in solving the problems of modern safety engineering, ergonomics and occupational safety [K2_W03].
2. Student knows in-depth the principles and rules of management, in particular project management, characteristic of safety engineering and ergonomics [K2_W06].
3. Student knows in depth the design methodology that takes into account the principles of safety and ergonomics [K2_W09].

Skills:

1. Student is able to develop and properly apply methods and tools for solving complex problems characteristic of the area of safety engineering, ergonomics and work safety, or select and apply existing and known analytical methods and tools in their area [K2_U03].
2. Student is able to identify changes in requirements, standards, regulations, innovations and technical progress as well as economic reality and to use them properly in solving problems in the field of safety engineering, ergonomics and occupational safety [K2_U06].
3. Student is able to cooperate with other people as part of teamwork on solving a problem characteristic of the area of safety engineering, ergonomics and occupational safety, as well as take a managerial role in these teams [K2_U13].

Social competences:

1. Student correctly identifies and resolves dilemmas related to broadly understood security, understands the need to raise public awareness of the need to shape security [K2_K02].
2. Student is ready to initiate actions and solutions related to improving safety [K2_K03].

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment:

- lectures: discussion on current lecture problems,
- classes: evaluation of reports on completed exercises and assessment of tasks to be completed independently,
- project classes: assessment of progress in the implementation of the project task (compliance with the adopted schedule of project implementation) and activities during the classes.

Summative assessment:

- lectures: colloquium on definitions and concepts in the last lecture class, closed test 10 questions, pass mark: 51%,
- tutorial classes: average of the grades for prepared reports, pass mark 51%,
- project classes: evaluation of the completed of the project, taking into account the assessment of progress in the implementation of the project task and activity in classes during the implementation of the project task, the pass threshold of 51%.

Grading scale:

- 0 - 50 insufficient
- 51 - 59 sufficient
- 60 - 69 sufficient plus
- 70 - 79 good
- 80 - 89 good plus
- 90 - 100 very good.

Programme content

Problems of designing socio-technical systems. Security of complex socio-technical systems.

Course topics

Lectures: The Human Factor in Technology – Theoretical Foundations. Discussion of the role of humans in technical systems, the significance of ergonomics and sociotechnics in shaping human–technology interactions. Diagnostics of sociotechnical systems. Evaluation and decomposition of sociotechnical criteria. Analysis of the functioning of systems integrating people and technology, methods for assessing and distributing qualitative criteria. Formal synthesis of evaluations. Methods of combining different assessment criteria into a coherent system, tools supporting decision-making. The problem of criteria in the design of sociotechnical systems. Challenges related to the selection and prioritization of criteria in the design of complex systems. Non-traditional sources and methods of analyzing design information. Exploration of new approaches to collecting and processing data to support the design process.

Exercises: Ergonomic analysis of simple technical systems. Diagnosis of sample sociotechnical systems. Prioritization of design criteria. Practical application of formal synthesis methods of evaluation. Analysis of design information from selected sources.

Project: Application of acquired knowledge to develop a comprehensive analysis of a selected

sociotechnical system.

Teaching methods

Lecture classes: information lecture, problem lecture, seminar with the use of a multimedia presentation.

The lecture is conducted using distance learning techniques in a synchronous mode.

Acceptable platforms: eMeeting, Zoom, Microsoft Teams.

Classes: the method of expert tables interchangeably with the method of cases. Project: multi-stage cognitive task.

Breakdown of average student's workload

	Hours	ECTS
Total workload	75	3,00
Classes requiring direct contact with the teacher	45	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	30	1,00
