

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Foundry and metal forming [S1IBio1E>OiOP]

Course

Field of study

Biomedical Engineering

Year/Semester

2/3

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

English

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

30

Laboratory classes

30

Other

0

Tutorials

0

Projects/seminars

0

Number of credit points

4,00

Coordinators

dr hab. inż. Anita Uściłowska

anita.uscilowska@put.poznan.pl

Lecturers

Prerequisites

Basic knowledge of chemistry, physics, mathematics and mechanics; skills of logical thinking; association of knowledge of many branches; getting and using information from library and internet; social expertise: needs of continuous learning, getting new knowledge

Course objective

Getting knowledge about casting processes and metal forming applying in manufacturing and exploitation of machines elements; recognise tools and machines used for casting processes and metal forming.

Course-related learning outcomes

Knowledge:

1. He/she has well-founded theoretical general knowledge about manufacturing technologies. He/she knows how to describe processes of manufacturing engineering materials, techniques of creating metals and alloys, machining and advanced technologies of subtractive machining, modern formation techniques
2. He/she can describe the specificity foundry processes
3. He/she can describe the basic casting technologies

4. He/she is able to safely perform the casting process for the selected casting technology
5. He/she is able to choose the casting technology depending on the product requirements

Skills:

1. He/she knows how to assess usefulness of methods and tools routinely used to solve engineering tasks of a practical character typical for materials engineering and select and use the right methods and tools
2. He/she knows how to solve technical problems using laws of mechanics and carry out strength analyses of machine elements and mechanical systems

Social competences:

1. He/she is well aware of the necessity for continuous learning and knows how to inspire and organize the process of learning of other people
2. He/she is well aware of the social role of a graduate of a technical university, understands the need to formulate and inform the public through mass media about technical achievements and of other aspects of engineering activity and makes sure that such information and opinions are conveyed in a way that is generally understood
3. He/she knows how to cooperate and work in teams assuming various roles within

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture:

Written test of general questions (positive note for minimum 50.1% correct answers: <50% - ndst, [50.1% - 60.0%]- dst, [60.1% -70.0%]- dst+, [70.1% - 80 %]db, [80.1% - 90.0%] - db+, [90.1% - 100%]- bdb)

Laboratorium:

Oral or written test of questions related to each experiment done in laboratory, written report of each experiment (according to lecturer instructions). To get credit every exercise must be passed (test and report).

Programme content

Lecture:

1. Foundry molds - raw materials and methods of making them.
2. Characteristic features and properties of foundry molds.
3. Physico-chemical phenomena during filling molds with liquid casting material.
4. Influence of cooling and solidification conditions of liquid metal on the properties of the casting.
5. Overview of casting methods.
6. Features of castings and methods of their production.
7. Theoretical knowledge about plastic forming of metal (plastic conditions, yield point, mechanism of plastic deformations).
8. Technological operation of sheets forming (cutting, bending, stamping) and rods (forging, rolling, extrusion).
9. material used in metal forming.
10. Changing of material parameters (characteristics) during plastic forming.
11. Information about tools materials and technological greases.
12. Imperfections in workpieces obtained in metal forming.
13. Technological processes - examples.

Laboratory:

1. Preparation and testing of the basic properties of molding sand.
2. Sand casting.
3. Die casting.
4. Special casting methods (lost wax method and casting in shell molds).
5. Application of computer technology in foundry.
6. Comparison of the features of castings obtained with different methods.
7. Characteristics of metal forming machines.
8. Sheet cutting using guillotine and disc scissors.
9. Stamping of cylindrical workpiece using hydraulic press.
10. Open forging using gravity hammer and die forging using screw press; extrusion using hydraulic press.

11. Stamping rectangular workpiece using hydraulic press.
12. Longitudinal and transverse rolling.
13. Estimation of material characteristics (tensile test, Erichsen test).

Course topics

1. Forming processes, advantages and disadvantages of plastic processing.
2. Stress and strain tensor, yielding stresses, strain hypotheses
3. Material strengthening, change of material properties during plastic deformation
4. Shearing cutting, on presses, cutting process phases, cutting force.
5. Bending - phases of the process, the phenomenon of springing
6. Stamping - process phases, limiting phenomena (flange folding, bottom detachment)
7. Defects of products obtained in plastic working

Teaching methods

Lecture:

Multimedia presentation (images, graphs, videos, simulations)

Laboratory:

Perform of experiments - presentation of results, practical work of students, discussion.

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,00
Classes requiring direct contact with the teacher	60	2,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	40	1,50
