Learning outcomes presented above are verified as follows:

Final written control work. In case of stationary work 10-15 open questions. In case of on-line work 10 open questions and 10 closed questions.

Programme content

Issues related to the use of spectroscopic methods (NMR) and MS to identify organic compounds and determine their structure.

Course topics

Course will offer the extension of the knowledge on the techniques applying the interactions of electromagnetic radiation with the molecules of organic compounds as well as the possibilities of their use for identifications of organic species. Possibilities and limitations of: UV/VIS, IR, NMR, MS and other techniques are discussed.
