

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Mathematics [S1MiTPM1>MAT1]

Course

Field of study	Year/Semester
Materials and technologies for automotive industry	1/1
Area of study (specialization)	Profile of study
–	general academic
Level of study	Course offered in
first-cycle	Polish
Form of study	Requirements
full-time	compulsory

Number of hours

Lecture	Laboratory classes	Other
45	0	0
Tutorials	Projects/seminars	
30	0	

Number of credit points

7,00

Coordinators

dr Alina Gleska
alina.gleska@put.poznan.pl

Lecturers

Prerequisites

Student possesses mathematical knowledge at basic level from secondary school. Student has logical reasoning skills

Course objective

The acquirement of knowledge and computational skills in single variable differential and integral calculus and complex numbers that are necessary to handle engineering problems.

Course-related learning outcomes

Knowledge:

1. Student has extended and in-depth knowledge of selected mathematic fields, including complex numbers and single variable differential and integral calculus.
2. Student has a systematized knowledge in the field of mathematics, useful in formulating and solving complex problems in the area of materials and technologies for automotive industry.

Skills:

1. Student is able to obtain information from literature, databases and other properly selected sources,

- including information in English; is able to combine the obtained information, to interpret and critically assess it, to draw conclusions and to formulate opinions and provide exhaustive justifications for them.
2. Student is able to use the known methods and mathematical models - and, if necessary, modify them - for the analysis and design of components of automotive systems.
 3. Student is able to develop, evaluate and use existing analytical, simulational and experimental methods to solve complex engineering tasks in the field of materials and technologies for automotive industry, including non-typical tasks that contain a research component.
 4. Student has the ability to learn independently, mainly in order to improve professional skills; is able to identify areas of detailed technical knowledge necessary to implement a specific engineering task and acquire them independently as well as present them.

Social competences:

1. Student understands the need of lifelong learning.
2. Student is able to cooperate and work in a team, and take different roles in it.
3. Student is able to define priorities which serve the implementation of a task assigned by him-/herself or by others.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lectures:

- assessment of knowledge and skills at the written exam checking knowledge of concepts and the ability to solve short practical tasks
- passing threshold: 50% of points.

Tutorials:

- assessment of knowledge and skills at three long written tests; the date of test will be announced at least a two-week in advance
- passing threshold: 50% of points

Programme content

Complex numbers

Sequences and infinite series

Differential and integral calculus of functions of a single variable

Course topics

COMPLEX NUMBERS

- Modulus, argument, principal argument
- Form: geometric, rectangular, polar (complex plane)
- Square root of complex number
- Quadratic equation on complex domain
- Derivation polar form from rectangular form
- de Moivre's formula
- formula for the n-th root of complex number
- formula for multiplication and division of two complex numbers that are in polar form
- Euler's formula for complex numbers

LINEAR ALGEBRA

- Definition of Cartesian product
- Definition of a matrix
- Operations on matrices (addition, multiplication by a constant, multiplication of two matrices, transposition)
- Definition of a determinant
- Definition of a determinant
- Properties of determinants
- Methods of calculating determinants: (Sarrus' method, Laplace expansion)
- Definition of an inverse matrix
- Determining an inverse matrix (from the definition, using Gauss' elimination method)
- Definition of matrix rank
- Properties of matrix rank
- Cramer's theorem

- Kronecker-Capelli theorem
- Homogeneous system of linear equations
- Gaussian elimination method
- Eigenvalue problem (eigenvectors and eigenvalues)

SEQUENCES

- Definition of a sequence
- Monotonicity of a sequence
- Definition of a limit of a sequence
- Properties of limits of convergent sequences
- Squeeze theorem
- Definition and properties of Euler's number
- Indeterminate symbols

FUNCTION OF A SINGLE VARIABLE

- Definition of function, injection, surjection
- Explicit, implicit and parametric relations
- Definition of an one-to-one function, a monotonic function, an inverse function, a composite function
- Trigonometric functions, inverse trigonometric functions, hyperbolic functions, inverse hyperbolic functions
- Definition of limit of a function
- Definition of continuity of a function
- Asymptote of a function
- Definition of a derivative of a function and its geometric interpretation
- Properties of derivation of functions
- Formulas for derivatives of sums, products, differences and quotients
- Definition of exact differential and its geometric interpretation
- Inverse function theorem
- Derivative of a parametrically defined function
- Logarithmic derivative
- Higher order derivative
- Chain rule
- L'Hospital's rule
- Mean value theorem
- Extreme values of functions (necessary and sufficient conditions)
- Monotonicity of a function
- Inflection points (necessary and sufficient conditions)
- Concavity and convexity of a function

INDEFINITE INTEGRAL

- Definition of indefinite integral and anti-derivative
- Properties of indefinite integrals
- Integration by substitution
- Integration by parts

DEFINITE INTEGRAL

- Definition of definite integral
- Properties of definite integral
- Integration by substitution
- Integration by parts
- Geometric interpretation of definite integral
- Definition of region with respect to x axis
- Definition of region with respect to y axis
- Application of definite integral: (area of a region, arc length, area of surface of revolution, volume of surface of revolution)

IMPROPER INTEGRAL (OPTIONAL)

- first type (infinite interval)
- second type (discontinuous integrand)

INFINITE SERIES

- Definition of an infinite series
- Summing an infinite series
- Necessary condition of convergence of an infinite series
- Convergence tests (comparison test, ratio test, root test)

Teaching methods

Lectures:

- lecture is conducted in an interactive way with formulating questions for a group of students or for selected students
- student activity during classes is taken into account when the final grade is considered

Tutorials:

- sample tasks are solved on the blackboard
- detailed discussion of solved tasks

Bibliography

Basic:

1. W. Żakowski, Matematyka, T.1 i T.2, WNT, Warszawa 2003.
2. M. Gewert, Z. Skoczylas, Analiza matematyczna 1 (Definicje, twierdzenia, wzory), GiS, Wrocław 2011.
3. M. Gewert, Z. Skoczylas, Analiza matematyczna 1 (Przykłady i zadania), GiS, Wrocław 2011.
4. T. Jurlewicz, Z. Skoczylas, Algebra i geometria analityczna 1, (Definicje, twierdzenia, wzory), GiS, Wrocław 2007.
5. T. Jurlewicz, Z. Skoczylas, Algebra i geometria analityczna 1, (Przykłady i zadania), GiS, Wrocław 2007.

Breakdown of average student's workload

	Hours	ECTS
Total workload	175	7,00
Classes requiring direct contact with the teacher	77	3,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	98	3,50
