COURSE DESCRIPTION CARD - SYLLABUS

Course name
Experimental Research in Transport [N2Trans1-TrSz>BEwT]

Course

Field of study
Transport

Year/Semester
1/1

Area of study (specialization)
Railway Transport

Profile of study
general academic

Level of study
second-cycle

Course offered in
Polish

Form of study
part-time

Requirements
compulsory

Number of hours

Lecture
18

Laboratory classes
0

Other
0

Tutorials
9

Projects/seminars
0

Number of credit points

3,00

Coordinators

dr hab. inż. Grzegorz Szymański prof. PP
grzegorz.m.szymanski@put.poznan.pl

Lecturers

dr inż. Tomasz Nowakowski
tomasz.nowakowski@put.poznan.pl

dr hab. inż. Grzegorz Szymański prof. PP
grzegorz.m.szymanski@put.poznan.pl

Prerequisites

The student has a basic knowledge of the techniques of measuring mechanical quantities and basic knowledge of modeling. The student is able to solve specific problems appearing in technical systems. The student is able to work in a group, taking different roles in it. The student is able to determine the priorities important in solving the tasks set before him.

Course objective

Learning methods and acquiring practical skills to solve tasks in the field of empirical research in rail transport.

Course-related learning outcomes

Knowledge:
has elementary knowledge of measuring mechanical sizes. Has a basic knowledge of the techniques of measuring vehicle components and assemblies. He can design a measurement path.

Skills:
is able to obtain information from literature, the Internet, databases and other sources, in Polish and foreign languages, is able to communicate using various techniques in the professional environment and other environments, using the formal recording of transport system models, concepts and definitions,

Social competences:
understands the need and knows the possibilities of continuous training, knows the need to acquire new knowledge for professional development, can think and act in an entrepreneurial manner, make decisions, act for the development of the employer and society

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:
The knowledge acquired during the lecture is verified by a 45-minute colloquium during the 7th lecture. Kolokwim consists of questions (test and open), with different scores. Passing threshold: 50% of points.

Programme content

Methodology of experimental research. Methods of planning scientific experiments. Methodology of measurement of mechanical quantities.

Course topics

Methodology of experimental research. Planning the experiment in the research of the dynamics of vehicles carried out in normal operating conditions. Fundamentals of measurements of mechanical quantities. Analog-to-digital conversion. Structured data-flow programming in the LabView® environment. Multidimensional analysis of data from the experiment.

Teaching methods

1. Lecture: multimedia presentation, illustrated with examples given on the board.
2. Laboratory exercises: a multimedia presentation, a presentation illustrated with examples given on the blackboard and the implementation of tasks given by the teacher - practical exercises.

Breakdown of average student's workload

	Hours	ECTS
Total workload	54	3,00
Classes requiring direct contact with the teacher	27	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	27	1,00
