

Internship software developer (frontend/backend)

What you will be doing when you are here

You'll be writing efficient and testable code for our various clients. This code will include web layouts and software interfaces, where you will integrate data from databases. You'll be doing this work in a team, under supervision of our senior developer(s). You'll also be meeting the client for feedback and progress reports. Because some of our assignments are very large, you'll also be documenting your work so it can be handed off to the stakeholders and other interns. You'll be responsible for keeping team members and the supervisor up to date on your progress. This includes asking for help if you get stuck and sharing your knowledge with other interns if they need help.

Above all, you'll be expected to help make sure Coders Academy stays a great place to work, and of course you will have the chance to become CA-Tabletennis-Champion!

What you have

Experience with PHP programming (OOP / PHP5.4&7)

Familiarity with SQL (MySQL / PostgreSQL)

Experience with HTML5 / CSS3

Experience with Javascript

Knowledge of front- and backend frameworks;

- jQuery
- Bootstrap
- Laravel (/Symfony)

Proficiency in English both written and spoken

What you are like

You can work without needing a lot of guidance

You love working in teams and don't mind helping others

You like joking around but are serious when needed

About us

Coders Academy is a fast growing startup aiming at assisting students and IT entrepreneurs by connecting them. We find and select ambitious potential interns, create teams with interns from different educational institutions and professional developers, and give them the opportunity to work at our office on various assignments of innovative entrepreneurs. This allows for interaction and knowledge exchange between the entrepreneurs and the interns while providing the interns with supervision, assistance, and a great place to work. We focus on making the right match between the intern, the entrepreneurs and the assignment. We have focused on creating an elaborate program for each intern to improve their technical knowledge and skills, as well as professional skills such as presenting and writing documentation. Coders Academy is located right in between Rotterdam Beurs and Blaak, meaning it only takes 5 minutes to walk to either station. Our central location means we are easy to reach by train, subway, tram and bus.
