

# Electrical Systems in Industry and Vehicles

Field of study: Electrical Engineering

## Programme description

Electrical engineering is a field of technology and science that deals with the generation, processing (transformation), transmission, distribution, storage and use of electricity. This is a wide and constantly developing field that includes many disciplines such as circuit theory, electromagnetic field, signal processing, control systems, robotics, information technology, communications and electronics. This diversity offers students a wide range of areas of specialisation, as well as a variety of career choices. Electrical engineering graduates can work as specialists in sample industries, e.g. in designer offices, production lines, automotive construction, power engineering, transmission systems, advanced measurement systems, medical equipment, PLC, IT and microprocessor programming. It is also very important that the electrical engineering master diploma allows to apply for an electrical license to an unlimited extent in the construction industry, which additionally increases the potential number of workplaces and provides very good earnings.

Electrical engineering graduates are also well prepared to independently self-study, and have good skills in organisational work. They know how to prepare great documentation and formulate technical texts. They are able to analyze a large amount of information and select those that may be most useful when solving a given problem. Currently, they are among the group of the most sought after and paid specialists in the country and abroad. Electrical engineering is constantly evolving very quickly. This is why graduates of this course have opportunity to be a part of this growth, what makes this work always interesting.

The specialty Electrical Systems in Industry and Vehicles focuses on construction, design and diagnosis of electrical, electronic and computer systems in industry and vehicles, electric, hybrid and traction vehicles, electrical energy storage, intelligent buildings and building security technology operation of technical systems, industrial automation and electronics, and electromagnetic compatibility, SCADA process visualisation systems and PLCs, comprehensive application of computer and microprocessor technology in the field of electrical engineering.

Graduates of this specialisation are highly sought-after and find interesting and well-paid jobs in companies such as Volkswagen, Solaris, Modertrans, PESA and other companies manufacturing electrical, electronic and IT equipment for vehicles, as well as factories producing and using systems for their diagnostics.

## Course summary:

### Semester 1

- Electrical engineering
- Electrical measurements of non-electrical quantities
- Electromechanical Propulsion Systems
- Electronics and power electronics
- Generation of electric Energy
- Mathematics
- Object oriented programming
- Renewable energy sources
- Short Course in Occupational Safety
- Elective Course: English for technology / German for technology
- Intelligent building

### Semester 2

- Computer measurement systems
- Cybersecurity and telecommunications in the power industry
- Decision algorithms in the electric power engineering
- Designing of measurement and control systems
- Disturbances in electric power systems
- Electromechanical Propulsion Systems
- Lighting engineering and electroheat
- Microprocessor technology
- Numerical methods in engineering
- Object oriented programming
- Selected problems of signal processing
- Elective Course: Interpersonal communication / Social Psychology
- Diploma seminar
- Electric and hybrid vehicles
- SCADA systems

### Semester 3

- Electromagnetic compatibility
- High voltage engineering
- Statistical process control
- Elective Course: Ethics and work psychology / Etiquette and self-presentation / Managerial skills training / Project management / Psychology of communication / Time and team management
- Diploma seminar
- Electrical installations in industry and vehicles
- Industrial automation systems
- Preparation of master's thesis
- Property security techniques
- Vehicle's electronic systems

# Electrical Systems in Industry and Vehicles

Field of study: Electrical Engineering

<b>University</b>	Poznan University of Technology Poznan, POLAND
<b>Degree to be obtained</b>	Master of Science
<b>Programme website</b>	<a href="https://www.put.poznan.pl/en">https://www.put.poznan.pl/en</a>
<b>Contact</b>	International Relations Office Piotrowo 5, room 101 61-138 Poznań, Poland
<b>Phone</b>	+48 61 665 3544
<b>Fax</b>	+48 61 665 3956
<b>E-mail</b>	<a href="mailto:study@put.poznan.pl">study@put.poznan.pl</a>
<b>Language of instruction</b>	English
<b>ECTS points</b>	90
<b>Duration</b>	1.5 years (3 semesters)
<b>Programme begins</b>	end of February
<b>Programme ends</b>	end of June
<b>Deadline for application</b>	3 months before the course starts – end of November
<b>Education requirements</b>	English language – level B2 (Common European Framework), Bachelor's degree or its equivalent in engineering or applied sciences, with a qualification in mechanical engineering. Full list of the required documents is available at: <a href="https://www.put.poznan.pl/en">https://www.put.poznan.pl/en</a>
<b>Mode of instruction</b>	Lectures, classes, laboratory classes, projects, workshops, internships
